

Lash Extensions + Lid Inflammation?

Consider Demodex Blepharitis

Patients who regularly wear eyelash extensions, strip lashes, long-wear lash adhesives or heavy eye makeup may experience symptoms associated with Demodex blepharitis.

COMPOUNDED TREATMENT OPTION

Ivermectin 1% / Ketotifen 0.025% Eyelid Ointment

Ivermectin targets mites associated with Demodex blepharitis.

Ketotifen provides antihistamine and mast cell-stabilizing activity.

Sig: Apply to the eyelid/lash margin area as directed by the prescriber.

- **Quantity:** 10 g
- **Patient Price:** \$85
- **UPS Ground Shipping:** \$15
